Summary:

- 1 – Problem description;
- 2 – Solution description;
- 3 – Results;
- 4 – Conclusion.

1 – Problem description

Project objective:

- Optimize the present distribution of a palletizing system of a factory

Original Surface

Pallet and boxes

1 – Problem description

Main constraints to be followed:

- Reduce by 2 the original surface (3.6 x 3.6 m)
- Data provided: dimension of the fixtures, velocity, flow
- Safety: DCS

2 – Solution description

- 2.1 – Robot choice;
- 2.2 – Robot and fixtures positioning;
- 2.3 – Robot trajectory and programming;
- 2.4 – Robotic cell inputs and outputs;
- 2.5 – Operational safety considerations.

2.1 – Robot choice

CentraleSupélec

We need to analyze the problem specifications

2.1 – Robot choice

- Robot application => Palletizing;
- Payload => Gripper + Box (70 kg)
- Range of action

1812.19 mm

2.1 – Robot choice

- Production throughput => 411 products per hour;
one box each 8.76 seconds;

The chosen one...

R-1000iA/80H

Number of axis	5
Reach	2230 mm
Load capacity	80 kg

2 – Solution description

- 2.1 – Robot choice;
- 2.2 – Robot and fixtures positioning;
- 2.3 – Robot trajectory and programming;
- 2.4 – Robotic cell inputs and outputs;
- 2.5 – Operational safety considerations.

2.2 – Robot and fixtures positioning

Problematic: size of the conveyors.

Solution:

verticalization!

2.2 – Robot and fixtures positioning

2.2 – Robot and fixtures positioning

CentraleSupélec

2 – Solution description

- 2.1 – Robot choice;
- 2.2 – Robot and fixtures positioning;
- 2.3 – Robot trajectory and programming;
- 2.4 – Robotic cell inputs and outputs;
- 2.5 – Operational safety considerations.

2.3 – Robot trajectory and programming

Frames

2.3 – Robot trajectory and programming

Register points

2.3 – Robot trajectory and programming

Offsets

PR[1]	Initial point ($P1 + PR[2]$)
PR[2]	Pick-up approach vertical distance (150 mm)
PR[3]	Collision avoidance vertical distance when picking a new box (350 mm)
PR[4]	Next-box position marker
PR[5]	Release approach vertical distance (150 mm)
PR[6]	Collision avoidance vertical distance when releasing one box in the pallet (350 mm)

2.3 – Robot trajectory and programming

Trajectory

2.3 – Robot trajectory and programming

Trajectory

2.3 – Robot trajectory and programming

Robot programming

Two programs: {

- MAIN
- Prisedepose_Conv

Important issues: Payload {

- (1) Empty gripper
- (2) Gripper + box

2 – Solution description

- 2.1 – Robot choice;
- 2.2 – Robot and fixtures positioning;
- 2.3 – Robot trajectory and programming;
- 2.4 – Robotic cell inputs and outputs;
- 2.5 – Operational safety considerations.

2.4 – Robotic cell inputs and outputs

Inputs

DI[1]	Box available to be picked
DI[3]	Empty pallet available before the charge zone
DI[4]	Pallet available to be charged
DI[5]	Charged pallet available to be removed

2.4 – Robotic cell inputs and outputs

Outputs

DO[2]	Turn on the conveyor to take the empty pallets to the charge zone
DO[3]	Turn on the conveyor to take the charged pallets to the removing zone
DO[5]	Turn on the box conveyor to take the boxes to the pick-up position
DO[6]	Turn on/off the gripper

2 – Solution description

- 2.1 – Robot choice;
- 2.2 – Robot and fixtures positioning;
- 2.3 – Robot trajectory and programming;
- 2.4 – Robotic cell inputs and outputs;
- 2.5 – Operational safety considerations.

2.5 – Operational safety considerations

CentraleSupélec

Risk assessment

- Access to the pallets
- Falling objects
- Maintenance

2.5 – Operational safety considerations

CentraleSupélec

Risk assessment

- Access to the pallets
- Falling objects
- Maintenance

2.5 – Operational safety considerations

CentraleSupélec

Risk assessment

- Access to the pallets
- Falling objects
- Maintenance

2.5 – Operational safety considerations

CentraleSupélec

First Solution: Fence

2.5 – Operational safety considerations

CentraleSupélec

Problems:

- Lack of protection
- Fence area

2.5 – Operational safety considerations

CentraleSupélec

Solution: Dual Check Safety Cartesian Position Check

2.5 – Operational safety considerations

CentraleSupélec

Solution: Interlock Switch

3 – Results & Performance

- 3.1 – Security;
- 3.2 – Surface;
- 3.3 – Production Throughput;
- 3.4 – Budget.

3.1 – Security

Compliance with ISO 13849-1:

Assessed sources of Risks

Evaluation of the risks posed by each one (PLr)

Is the proposed solution adequate ($PL \geq PLr$)?

3.1 – Security

CentraleSupélec

Compliance with ISO 13849-1:

3.1 – Security

Compliance with ISO 13849-1:

Source de Risque	S	F	P	PLr
Accès des palettes	S2	F2	P1	PLd
Maintenance	S2	F1	P1	PLb
Chute d'objets	S1	F2	P1	PLb

3.1 – Security

Compliance with ISO 13849-1:

Function name	Standard/Optional	ISO13849-1/IEC61508
Joint Position Check Function	Option A05B-2600-J567	Category 3 PL d SIL 2

3 – Results & Performance

- 3.1 – Security;
- 3.2 – Surface;
- 3.3 – Production Throughput;
- 3.4 – Budget.

3.2 – Surface

Total Area: **7.47 m²**

Equivalent to 57.61% of
initial area

3.2 – Surface

Working surface: **5.33 m²**

Equivalent to 41.14% of
initial area

3 – Results & Performance

- 3.1 – Security;
- 3.2 – Surface;
- 3.3 – Production Throughput;
- 3.4 – Budget.

3.3 – Production Throughput

720 boxes / hour *

About 75% more than
the original cell
throughput

3 – Results & Performance

- 3.1 – Security;
- 3.2 – Surface;
- 3.3 – Production Throughput;
- 3.4 – Budget.

3.4 – Budget

**Robot R-1000iA/80H + R-30iB
Controller and DCS Module**

About 45000 + 2000 €

3.4 – Budget

Suction Gripper

About 700 €

Merely illustrative

3.4 – Budget

CentraleSupélec

Elements	Price
Robot R-1000iA/80H	45000 €
DCS Module	2000 €
Suction Gripper	700 €
Total	47700 €

4 – Conclusion

- Faster than expected
- Considerably cheap
- Less than 50% of initial surface
- Software maintainability

Thank you for your attention!

Any questions?
